Project Design Phase-II Technology Stack (Architecture & Stack)

| Date | 15th October 2022 | |
|---------------|---|--|
| Team ID | PNT2022TMID08788 | |
| Project Name | Project - Cloud based Web Application for | |
| | Inventory Management | |
| Maximum Marks | 4 Marks | |

Technical Architecture:

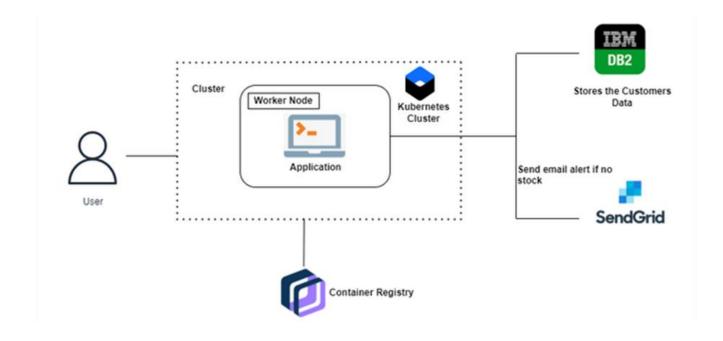

Table-1: Components & Technologies:

| S.No | Component | Description | Technology | |
|------|---------------------------------|---|---|--|
| 1. | User Interface | The interaction between the user and application e.g., Web UI, Mobile App, Chatbot etc. | HTML, CSS, JavaScript / Angular Js / React Js etc. | |
| 2. | Application Logic-1 | Framework used for designing the application. | Java / Python | |
| 3. | Application Logic-2 | Accessing the cloud and storing the details of the users both Inventory and User. | IBM Watson STT service | |
| 4. | Application Logic-3 | Logic for a process Docker is an open-source platform for building, deploying, and managing containerized applications in the application | IBM Watson Assistant | |
| 5. | Database | Data Type, Configurations etc. | MySQL, NoSQL, etc. | |
| 6. | Cloud Database | Database Service on Cloud | IBM DB2, IBM Cloudant etc. | |
| 7. | File Storage | File storage requirements | IBM Block Storage or Other Storage Service or Local Filesystem | |
| 8. | External API-1 | Purpose of External API used They make it easier for developers to store, manage and deploy container images. in the application | IBM Weather API, etc. | |
| 9. | Infrastructure (Server / Cloud) | Application Deployment on Local System / Cloud | Local, Cloud Foundry, Kubernetes, etc. | |

Table-2: Application Characteristics:

| S.No | Characteristics | Description | Technology |
|------|--------------------------|---|--------------------|
| | | | |
| 1. | Open-Source Frameworks | Application Deployment on Local System / Cloud | Python - Flask |
| 2. | Security Implementations | Container registry and Kubernetes Cluster are Container registry and Kube | |
| | | used for encryption of data. | Cluster |
| 3. | Scalable Architecture | Kubernetes Cluster allow containers to run across | Kubernetes Cluster |
| | | multiple machines and environments. | |
| 4. | Availability | Kubernetes Cluster provides all time availability. | Kubernetes Cluster |
| 5. | Performance | Docker improves the application performance. | Docker |
