Objective

To secure employment with a reputable company, where I can utilize my skills and business studies and a challenging position in my dream company in order to expand my experience and skills and work towards the overall growth of the organisation.

Education

Pursuring	**Dr.Mahalingam college of engineering and techology** B.E/Electronics and communication engineering 7.8 upto 4semister
2017	**Senthil matric higher secondary school** SSLC 85%
2019	**Sri vijay vidyalaya matric higher secondary school** HSLC 65%

Skills

C

Python

Projects

Home security alaram using aurdino

The basic idea behind this project is that all the bodies generate some heat energy in the form of infrared which is invisible to human eyes. But it can be detected by electronic motion sensor. The project involves the use of Arduino, motion sensor, buzzer, LCD display and a simple program. The sensor detects any motion in its permissible range and triggers the alarm. It will send the signal to Arduino which processes the signal and set ON the alarm along with detection message on display. With this system we can easily set up a security alarm in our home to protect us from intruders.
